Vaccination Consent Form:

The veterinarians at Boulevard Veterinary Group firmly believe the benefits of vaccination outweigh the risks. However, like any medical procedure, vaccinations carry inherent risks. Although most adverse reactions associated with vaccinations are minor, on rare occasions vaccinations may be associated with serious side effects.

Common reactions which normally occur in minutes to hours and subside within 24-48 hours:

- Pain or swelling at the injection site
- Tired and less active, more quiet than usual
- Loss of appetite

Very Rare but Severe reactions that require immediate veterinary care:

- Rapid, difficult, or noisy breathing (PANTING IN CATS)
- Severe trembling
- Facial swelling (will be obvious) and/or hives (raised circular swellings on the body)
- Sudden onset of vomiting or diarrhea
- *UNRESPONSIVE sleepiness from which you cannot awaken your pet

If the site of a vaccination remains swollen, or is getting larger, one month following vaccination, or is still present three months after vaccination, PLEASE MAKE AN APPOINTMENT WITH US, as this could be the sign of a more serious problem.

Media Release Consent

I hereby give Veterinary Wellness Center of Boerum Hill permission to take and post pictures of my pet to lawfully use on social media outlets. No royalty or fee to me is associated with this use.

- Yes, you **can** post pictures and media content
- No, you **cannot** post pictures and media content
